EDUCATION

Indian Institute of Technology (IIT) Delhi — B.Tech, Engineering Physics *2018 – 2022*

PROFESSIONAL SUMMARY

Senior Backend Engineer with **4+ years architecting scalable microservices and event-driven platforms** across B2B marketplace, mobility, and healthcare domains. Stack specialist in **Java/Spring Boot, PostgreSQL, Redis, and AWS** with AI-augmented workflow (**Claude Code** — *CLAUDE.md*, custom Skills, MCP servers; Anthropic/OpenAI APIs) — shipped backend microservices such as rate limiting, geospatial engines at 10K+ scale, SOC 2-compliant Terraform infrastructure, and real-time ETL pipelines from design to production serving millions of users. Partners cross-functionally with Product, Ops, and QA to drive measurable outcomes in engagement, conversion, and retention.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript/TypeScript, SQL, C++
Backend & Frameworks: Spring Boot, Hibernate/JPA, Node.js, NestJS, REST, gRPC, OAuth2, WebSockets, Kafka/SQS
Data & Caching: PostgreSQL, MySQL, Redis, MongoDB, Materialized Views, Prefect ETL, Algolia, Typesense
Cloud & DevOps: AWS (ECS, EC2, RDS, S3, SQS, SNS, EventBridge, IAM, VPC), Docker, Kubernetes, Terraform, CI/CD
Architecture: Microservices, Event-Driven Systems, Distributed Caching, Geospatial (Quadtree/Geohash), LLM APIs

PROFESSIONAL EXPERIENCE

Keychain (B2B Marketplace for Brands & Manufacturers) | Gurgaon *May 2025 – Present*
Senior Backend Engineer (SDE II) — Edge Team

- **Architected a Contract microservice** (Spring Boot + PostgreSQL) with a layered amendments model and a **two-tier Redis + materialized-view caching strategy**; **partnered with Product and Ops** on quota policy — **cut query latency 85%** and lifted brand-manufacturer match accuracy **60%**.
- **Architected** and **led cross-functional delivery** of the Edge Newsletter platform — SendGrid-aliased sender addresses, segment-based audience-management APIs, scheduler + CRON dispatch modules, inbound-parse webhooks for replies, and a **Prefect ETL pipeline** streaming SendGrid events into a *campaign_metrics* warehouse.
- **Developed an event-driven communications layer** with **intelligent 30-minute comment batching** across blogs, newsletters, and LinkedIn posts; Twilio message ingestion with retry logic for the batching pipeline in service-whisper; automated Zendesk ticketing and Slack alerting on every Edge event, improving CS response time and cutting noise.
- **Created an adaptive intro-batching framework** on **EventBridge Scheduler** with engagement-based 6-hour evaluation windows and branching DRIP flows — **+65% brand engagement** and **3–4% conversion lift**; built a **quadtree-indexed** supplier recommendation engine across **10K+ facilities** raising manufacturer retention **40%**.
- **Spearheaded SOC 2-compliant Terraform infrastructure** across stage + prod with IAM policies and centralized audit logging — **80% drop in security incidents** and **30% faster CI/CD**; architected OAuth-based integrations with **LinkedIn** (encrypted session storage) and **Calendly** into a centralized event-ingestion layer.

BluSmart (Electric Ride-Hailing Platform) | Gurgaon *Sept 2024 – May 2025*
Senior Backend Engineer (SDE II)

- **Developed an API-security layer** with rotating secrets, rate limiting, request throttling, and OTP-based fraud prevention — neutralized active DDoS/OTP-bombing attacks and **prevented significant financial loss**.
- **Revamped the Suggested Places algorithm** using geohashing over historical ride data — **–20% booking time**, **70% of users** booked from suggestions; resolved concurrency and race-condition defects across high-traffic Spring Boot APIs, raising reliability **45%** across millions of daily requests.
- **Engineered a multi-region Referral Program** across India and UAE with Spring AOP for synchronization and data consistency; instrumented New Relic, Redis caching, and parallel processing for observability and reduced latency.

Panscience AI Healthcare | Delhi *Feb 2023 – May 2024*
Founding Engineer

- **Architected a FHIR-compliant microservices platform** from zero to production — dedicated auth/authz servers, API gateway, PostgreSQL + MongoDB + Redis data layer, and secure file-upload pipeline; drove interoperability and regulatory compliance across healthcare modules.
- **Planned and deployed AWS cloud architecture** with hardened security groups, load balancers, and IAM roles; **reduced AWS costs 40%** through right-sizing and caching strategy.

FarEye Technologies | Noida *Sept 2022 – Jan 2023*
Backend Engineer (SDE I)

- **Integrated 15+ carrier and client systems** via Spring Boot, REST/SOAP, and AWS S3 processing **100K+ daily transactions**; built a reusable connector framework that cut integration time **60%**. Led a team that won a 3-day internal hackathon building a booking-and-payments clone on Spring Boot microservices.
