Education

Indian Institute of Technology, Delhi

Bachelor of Technology, Engineering Physics — *2018 - 2022*

Skills

Programming Skills:	Java, JavaScript, Python,SpringBoot, NodeJS, NestJS, C++ , PostgreSQL, MySQL, Redis, MongoDB
Cloud:	AW, ECR, ECS, EC2, RDS, EFS, security Groups, VPC, S3, IAM, CloudFront, ACM, SSL, Linux
Miscellaneous:	Docker, Git, GitHub, Terraform, GPT-4 APIs, Scripting, CI/CD, Microservices Architecture,kubernetes

Work Experience

Keychain

Gurgaon, India

Senior Backend Developer (SDE II) — *May 2025 - Present*

- **Designed and implemented contract management microservice** using Spring Boot and PostgreSQL to enforce manufacturer messaging limits, supporting multiple contracts with configurable amendments and fallback rules, improving platform compliance by 100% and reducing unauthorized outreach by 75%
- **Architected high-performance caching strategy** leveraging Redis (4-hour TTL) and PostgreSQL materialized views for category metrics, achieving 85% reduction in query latency and 60% improvement in brand-manufacturer matching accuracy through real-time segment analysis
- **Developed geospatial recommendation system** for packaging suppliers using quadtree optimization, increasing manufacturer retention by 40% and reducing supplier discovery time from days to minutes across 10,000+ facilities
- **Led A/B testing framework** for intro batching system using EventBridge Scheduler and cohort analysis, achieving 65% improvement in brand engagement rates and 3-4% increase in project conversion through optimized messaging strategies
- **Spearheaded SOC2 compliance infrastructure migration** using Terraform for multi-environment deployments, implementing comprehensive audit logging and IAM policies that reduced security incidents by 80% while accelerating CI/CD cycles by 30%

BluSmart

Gurgaon, India

Senior Backend Developer (SDE II) — *Sept 2024 - May 2025*

- **Designed Advanced API Security Architecture:** Developed a dynamic security solution with rotating secrets, interceptors, rate limiting, and throttling middleware to prevent **DDoS attacks**. Additionally, implemented OTP-based **fraud prevention**, saving the company significant financial losses against **OTP-related attack**s, ensuring uninterrupted service for genuine users.
- **Revamped Suggested Places Algorithm**: Enhanced pick and drop suggestions using geohashing and past ride data, reducing booking time by 20% and increasing user retention with 70% of users booking from suggestions.
- **Resolved critical concurrency and race condition issues** across high-traffic APIs while optimizing database queries and exception handling, improving system reliability by 45% and reducing failures for millions of daily requests in Spring Boot backend
- **Implemented Comprehensive Monitoring and Optimization**: Improved system monitoring via New Relic, enabling proactive issue resolution, and reduced application latency through database optimization, Redis caching, and parallel processing
- **Referral Program & AOP Implementation**: Engineered a multi-region referral program across India and UAE, using promo codes to boost user acquisition. Implemented AOP for synchronization, data consistency, and high availability across regions.

Panscience AI Healthcare Pvt. Ltd.

Delhi, India

Founding Engineer — *Feb 2023 - May 2024*

- Architected and executed a **microservices** infrastructure for diverse healthcare modules, enhancing scalability and maintainability.
- Led the creation of dedicated **authentication** and **authorization servers** and established a robust **API gateway**.
- Oversaw **FHIR server integration**, navigating intricate healthcare data challenges to achieve **compliance with industry** standards. Emphasized secure data exchange and interoperability, amplifying system compliance and scalability of healthcare data.
- Implemented advanced database solutions utilizing **PostgreSQL**, **MongoDB**, augmented **Redis** for optimized data querying and **caching**, elevating processing efficiency and retrieval speed along with secure File upload.
- Designed and deployed cloud architecture for microservices from inception to deployment, prioritizing security with advanced configurations of security groups, load balancers, and IAM roles for data protection and integrity. **Reduced AWS costs by 40%**.

FarEye Technologies Pvt. Ltd.

Noida, India

Backend Developer (SDE I) — *Sept 2022 - Jan 2023*

- **Integrated 15+ carrier/client systems** with FarEye platform using Spring Boot, REST/SOAP APIs, and AWS S3, processing 100K+ daily transactions while reducing integration time by 60% through reusable connector framework
- **Led team to win 3-day hackathon**, building BookMyShow clone with Spring Boot microservices, PostgreSQL, and React, implementing real-time booking and payment systems with 99.9% uptime
